Non-Technical Overview

Purpose

Ananplasma Bot reviews anaplasma cases and reports using emails to NBS personnel. It processes cases, validates data, and flags issues for manual review.

Key Features

- Automated case processing
- Data validation
- Email notifications
- Manual review flagging
- Patient data verification
- Lab data verification
- Investigator verification

Business Benefits

- Reduced manual processing time
- Consistent data validation
- Automated quality checks
- Streamlined case management

- Improved data accuracy

Technical Documentation

System Overview

Ananplasma Bot extends Ananplasma which inherits from Base Bot allowing access to all its functionality. It includes:

- Automated login and navigation
- Comprehensive data validation
- Error handling and recovery
- Reporting functionality
- Integration with external services (USPS, SMTP)

Core Workflows

1. Case Processing

- Queue management
- Case sorting
- Data validation
- Issue flagging

2. Reporting

- Email notifications
- Manual review logging
- Status updates

Developer Reference

Code Structure

Base Class

```
class AnaplasmaCasereview_revised(NBSdriver):  
    """ A class inherits all basic NBS functionality from NBSdriver and adds  
        methods for reviewing COVID case investigations for data accuracy and completeness. """
```

Key Components

1. Configuration Management
 - Environment selection
 - API credentials
2. Navigation Methods
 - Queue management
 - Case navigation
 - Form handling
3. Data Validation
 - Demographics
 - Investigator checks
 - Lab data
 - Patient status
 - Dates
 - Addresses.

Validation Checks

Demographic Validation

1. Personal Information
 - Name verification
 - DOB validation
 - Age verification
 - Race validation

- Address verification

2. Location Data

- ZIP code validation
- County verification
- State/country checks

Investigator Checks

1. Investigator

- Investigation duration
- Investigator assignment
- Jurisdiction validation

Lab Data Management

1. Lab Reading

- Associated labs
- Assign lab types
- Case status check
- Collection Date
- Report Date

Medical Information

1. Patient status

- Hospitalization
- Illness duration
- Physician checks
- Case status

Required Fields

- Personal identifiers
- Location data
- Medical information
- Reporting details
- MMWR data

Error Handling

Retry Logic

- Configurable attempts
- Timeout management
- Session recovery

Issue Tracking

- Validation issues log
- Manual review queue
- Lab data issues

Integration Points

External Services

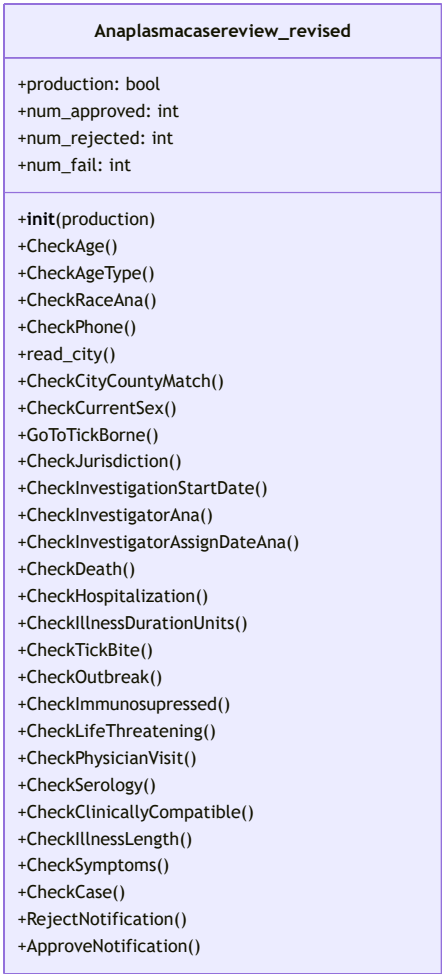

- USPS API
- SMTP email
- Chrome WebDriver
- RSA authentication

Data Exchange

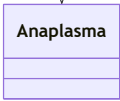

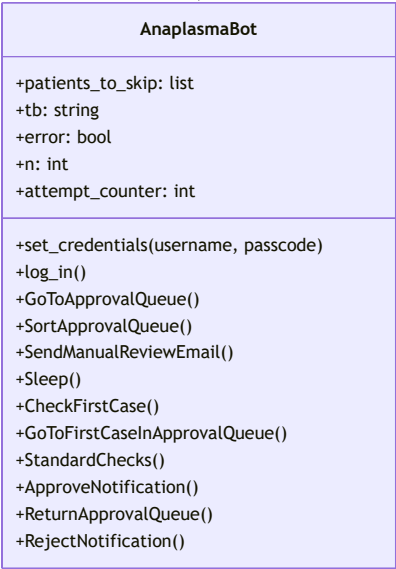

- Lab data processing
- Address verification
- Email notifications

Extends Anaplasma which extends Base Bot\nHandles NBS initialization, authentication and miscellaneous methods

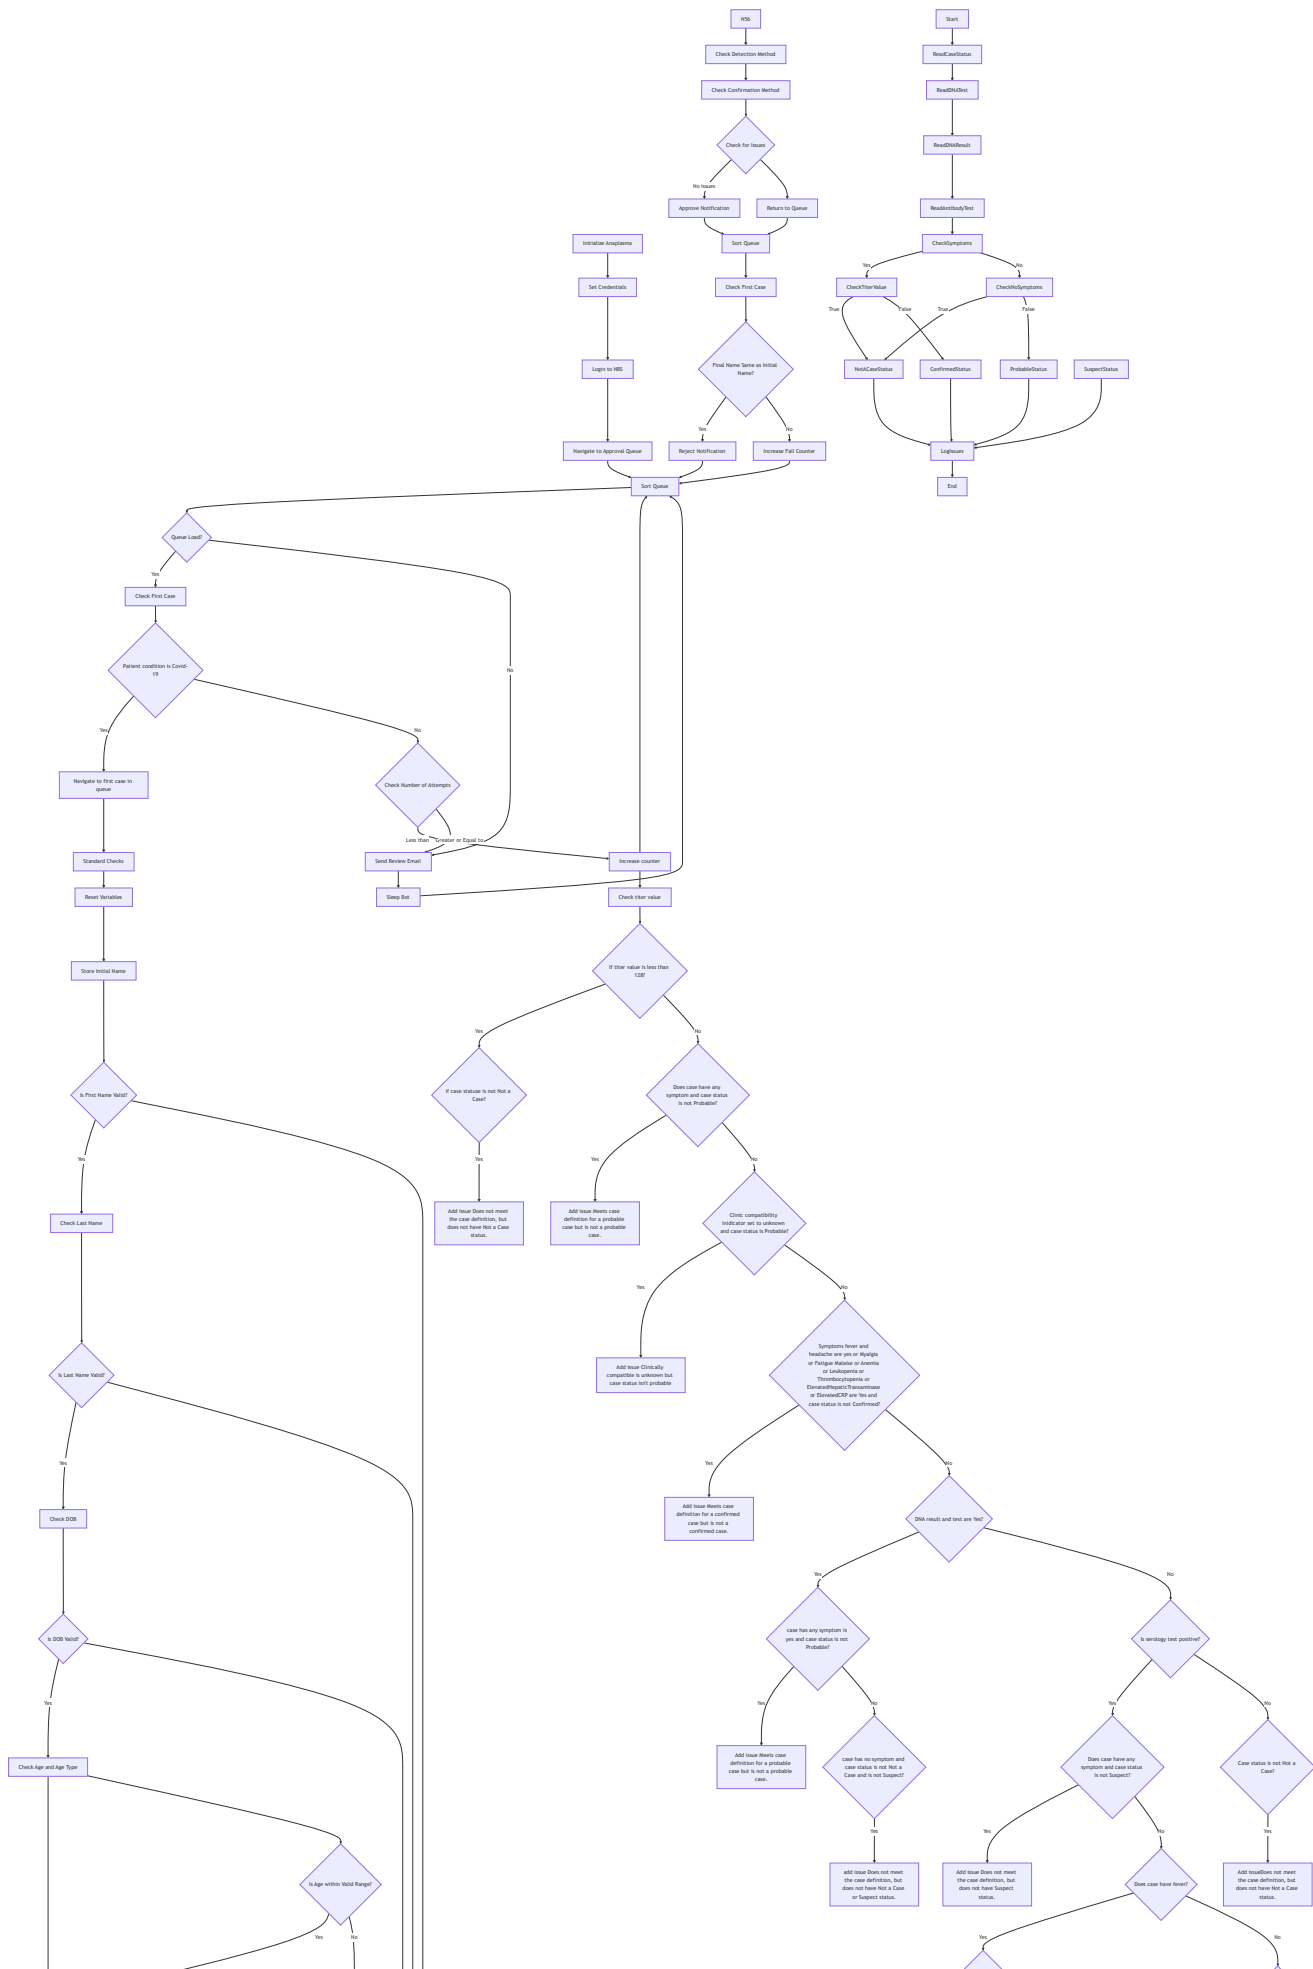

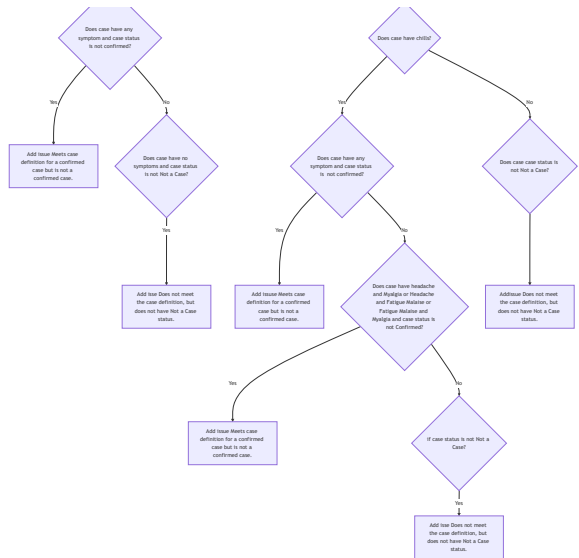

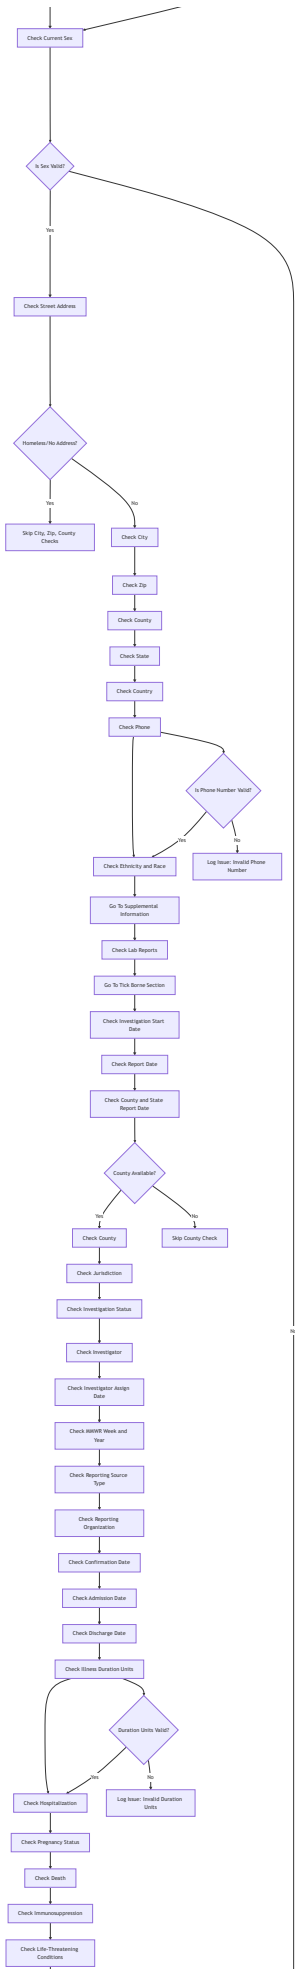

Process Flow

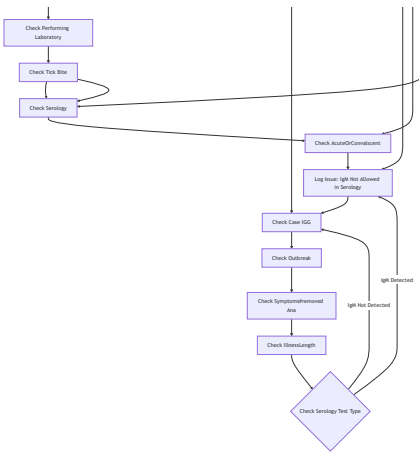

Extended

Maintenance Guidelines

Configuration Updates

- Regular review of timeouts
- Email list maintenance
- API credential updates
- Retry attempt optimization

Monitoring

- Manual review frequency
- Timeout occurrences
- Email notification success
- SSL certificate status

Performance Optimization

- Wait time review
- Queue processing efficiency
- Batch size adjustments
- Resource utilization

Support and Troubleshooting

Common Issues

1. Login Failures

- Check RSA token
- Verify SSL certificates
- Confirm credentials

2. Timeout Issues

- Review wait settings
- Check network connectivity
- Verify NBS availability

3. Validation Errors

- Check data completeness
- Verify field formats
- Review business rules
